Patent 09/785,243

## IN THE CLAIMS

Please amend Claim 7 as shown.

Please cancel Claim 11.

- 1-6. (Canceled)
- (Currently Amended) A cooling apparatus, comprising:
- a circulating unit adapted for chilling and circulating a fluid;
- a flexible elongated catheter;
- a flexible tubular outer catheter body on said catheter;
- a flexible, insulated, supply tube within said outer catheter body, a proximal end of a central lumen of said supply tube being connected in fluid flow communication with an outlet of said circulating unit;
- a return lumen within said outer catheter body, said return lumen substantially surrounding said fluid supply tube, a proximal end of said return lumen being connected in fluid flow communication with an inlet of said circulating unit; and
- a flexible heat transfer element mounted to a distal end of said outer catheter body, said heat transfer element having a partially helical shape to increase the surface area available for heat transfer and a blood flow passageway through the partially helical shape of the heat transfer element;

wherein said fluid supply tube comprises a wall having insulating properties to reduce heat transfer from said return lumen to said central lumen of said fluid supply tube.
